

Information for repeaters. Biochemistry II.

General Medicine

(2015/2016. 2nd semester):

- Every repeater has to **register** into a 2nd year group until 12th February on the NEPTUN. You have to visit all lessons of the subject in this group (exception can be given by the head of department). The final name list of 2nd year students will be posted on the information board of the department (LSB downstairs, 1st corridor) and on our website on the 5th week. Please check your name and your group number, if you have any problem, please contact us on email (encs.mirjam@med.unideb.hu) during the 5th week.
- Repeaters will get **new code numbers** in this year. New code numbers will be given by the seminar teachers on the 5th week seminars, or you can ask it from Encs Mirjam (education official) on email: encs.mirjam@med.unideb.hu. This code number will be different from the NEPTUN code!
- **Lectures** are not obligatory for repeaters, they can collect bonus points without visiting the lectures (if they attend them previously and have got the signature).
- Repeaters can visit the **seminars** and can collect bonus points, but the seminars are not obligatory for repeaters (if they previously attend them). All repeaters have to pick up the seminars in the Neptun.

In this semester **students can collect bonus points on the seminars**. Based on the knowledge and activity on the seminars, the best students can collect max. 8 bonus points (max. 20% of students can get 8 bonus points and further max. 30% of students can get 4 bonus points). Seminar bonus points will be added to the total points collected during the semester. **Bonus points can't be transferred from the previous years.**

- **Practices are not obligatory for repeaters** (if they made them previously). Last year Gen.Med. practical points are counted automatically (you don't have to write any request about it). **But!** The previous practice points will be multiplied by 0,8 points, because in this semester students can collect max. 20 bonus points by the practices (last year it was max. 25 points). All repeaters have to pick up the practices in the Neptun. GM students can decide to make the practices again in order to improve the practice points, but in this case students have to do all the practices and write the lab. test again. **You cannot rewrite the lab.test without repeating the labs!**
- In this semester **GM students** can collect 80 points by two control tests (all together 80 test questions, 1 point for each correct answer), 20 points on the practicals, and 8 points on the seminars (100 + 8 points).
- **Repeaters can not transfer the points of Biochem II. control tests from the previous years. If you want to collect the points, you have to write the tests again.** You can write the control tests without any request letter. Control tests are not obligatory.
- **Exemption from the written part of the final exam can't be transferred from the previous years!**
- In this year, basic Molecular Biology questions will be also asked in the „entrance” questions of the final oral exam.
- Electronic lecture material can be downloaded from our website (<http://bmbi.med.unideb.hu>, username: student, password: student2015).
- **Any request letters can be delivered personally in the official hours (LSB 3rd floor 3.101. room, contact hour: 11-12:30 o'clock).**
